SFR-APF active harmonic filter is a new type of power quality improvement production for dynamically filtering harmonics and compensating reactive power. It can filtering and compensate harmonic (variable in orders and frequency) and dynamic reactive power in real time. It is used to overcome the shortcomings of conventional harmonic suppression and reactive power compensation methods such as passive harmonic filters, and achieve the harmonic filtering function and reactive power compensation function of the system. SFR-APF is widely used in power, metallurgy, petroleum, port, chemical industry and industrial and mining enterprises.

## HMI Display

- 7/10 inch full color LCD optional
- Real time display of signal detection, data processing and calculation in power system
- Visualization of power quality data and charts
- Monitoring and function setting of module working status
- Quick view of SOE events
